

MANSA CAPITAL

PRIVATE CLIENT
INVESTMENT

OVERVIEW

Mansa Musa, once the richest man in the world, so rich that in his pilgrimage to Mecca, he devalued the price of gold by bestowing wealth to the poor. Five centuries later, Mansa Capital is born with the same objective - to create a sustainable global economy.

REPORT

We aim to create a sustainable economy using data science applications and artificial intelligence. By focusing on agricultural commodities, we create services to build commodity exchanges and preserve wealth for investors by actively engaging in the commodity futures market. Using a complete automated algorithmic methodology, we preserve value while maintaining local equity.

- We have restructured traditional investing, with the strength of data science and machine learning.
- We create novel models that can withstand the unforeseen volatility of commodity markets-
- Distributing easy-to-access technology globally

OUR MISSION

Mansa Capital is a financial technologies innovator which intends to build equitable, globalizing financial systems for burgeoning markets. The backbone of our business and entry plan is our hedge fund which will primarily trade commodities.

Our pride relies on our novel ethical products that prioritize protecting local growers from predatory practices while creating sustainable economies in developing markets. will focus on a clientele of small businesses and accredited investors, offering our financial services to other startups.

At Mansa Capital, we believe that the end does not justify the means. Therefore, in every single decision we make, we always align to our values and moral.

OUR VALUES

Novelty - unique and specialized approach to investing with the power of AI

Transparency - communicating and reporting to our investors with emphases in timeliness and accuracy

Innovation - continuously striving to compete with the market-best technology and consistently upgrading our products.

Integrity - providing ethical services to clients while prioritizing diversity, equity, and inclusion.

PRODUCTS

SUSTAINABLE COMMODITY HEDGING

Rice is a critical agricultural product consumed by billions of people worldwide, mostly in developing countries. As experts in the rice commodity market, we offer a sustainable approach to hedging the price of rice futures through our algorithmic iron-condor strategy. By predicting the volatility of rice production in key regions such as India and the USA, we can effectively stabilize the price of Rough Rice and Paddy Rice assets in the CBOT and NCDEX futures markets, prompting returns for our investors.

Novel Commodity Exchange Creation

Beyond wealth management, Mansa Capital intends to build innovative financial solutions. Our first step in this direction is the Franklin Templeton Blockchain Contest where our team has been accepted to compete for a \$15k grand prize. Our idea is to build a commodity market which leverages blockchain's security and decentralization to power a direct producer-consumer commodity market. It would allow any producer to list legally binding futures contracts for their product - effectively bringing commodities back to their non-speculative roots. One of our founding members has experience building blockchains in the Polkadot ecosystem and has extensive industry experience, allowing us to see this project as the perfect marriage of our knowledge bases in commodities-finance and blockchain/distributed systems engineering.

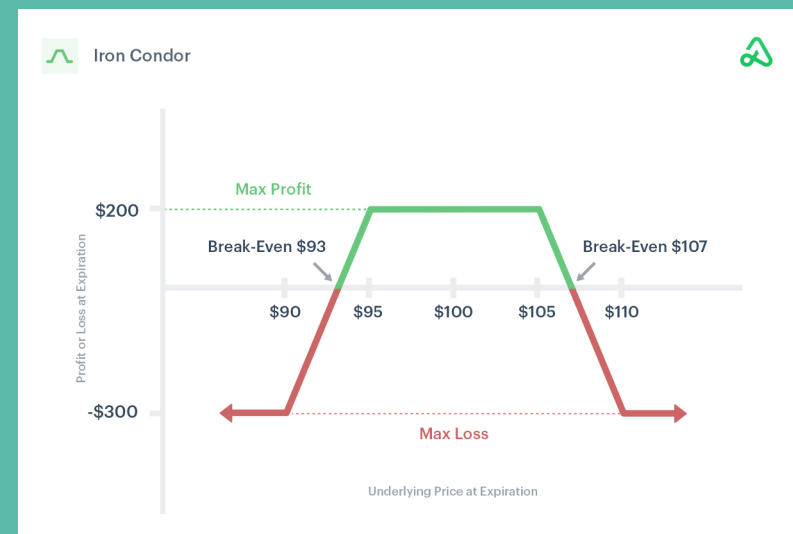

STRATEGY

As part of our entry plan, we specialize in agricultural commodities; more specifically, international rice options because it gives us an edge on our much larger competitors. Established funds would have a difficult time generating better returns in our intended markets because, at their scale, they would concentrate in wider-ranging industries that encompass larger-scale returns. We are confident in our ability to generate profit—*uncorrelated* from the stock market—because our team has already spent more than a year researching the price of rice through our UCSD HDSI-funded project on food insecurity predictions.

We built our mathematical modeling non-profit, COMPASS, around this project, and have reached a point where we believe in our ability to create a profitable venture off of what we have learned as scientists, engineers, and leaders.

With our tested state-of-the-art models, we strive to preserve and generate wealth for our patrons by creating an automated system that trades contracts of agricultural commodities in the most optimal timings possible.

To accomplish this, we deploy the iron condor options trading strategy backed by terabytes of data comprised of both financial and climate statistics. Our methodology allows for us to gain the most profit while managing our risks adequately, by predicting that our model falls under the distributions of the boundaries that our invention deem fit. t

PACKAGES

CATEGORY	MINIMUM	INITIAL INVESTMENT CHARGE	PERFORMANCE COMMISSION FEES	MEETING AVAILABILITY	FINANCIAL REPORTS FREQUENCY
Mansa Base Care package	\$10,000	3% off (annual charge)	24% off		Quarterly financial reports
Mansa Plus Care package	\$50,000	2.5% off (annual charge)	22% off	Ability to schedule private meetings at least once a month	Bimonthly financial reports
Mansa VIP Care package	\$100,000	2% off (annual charge)	20% off	Ability to schedule private meetings at least once a	Monthly financial reports

NEXT STEPS

Keep in touch by providing us your preferred method of communication and our COO, Taerim, will reach out for further information. We will employ a thorough background check and an accredited investor verification form to ensure we follow the guidelines set out by the SEC. After the process is finalized, we will reach out to you to schedule a follow-up appointment to advance in the investment agreements. .
